## Scrubmaster B75i

## Technology that understands!

The autonomous scrubber-drier

User-friendly with intuitive touch control

## Right for every environment:

Depending on the type of floor and degree of soiling, the Scrubmaster B75 i is available as a disc brush or cylindrical brush variant.

Meets the highest hygiene requirements: the antibacterial tank feature Hako-AntiBac®.

Cylindrical brush and side broom enable wet cleaning and sweeping in a single working step.

Optimal intake of dirt water via the squeegee.

The 8-inch LCD panel clearly displays all relevant information.

## Learns fast, cleans faster

Whether as disc brush or cylindrical brush variant and equipped with one or two additional side brooms: The Scrubmaster B75i cleans learned routes autonomously, reliably and safely because the 3D camera system and certified LiDAR sensors not only enable efficient navigation, but also compliance with safety standards. Operation via the clearly arranged 8-inch LCD panel is simple and intuitive. Yet another advantage: For quick cleaning jobs in between, the Scrubmaster B75i can also be operated manually as a conventional walk-behind scrubber-drier and ensures ergonomic use thanks to the extendable handle. As the future will increasingly see autonomous cleaning, Hako is already developing complementary systems - for example a home base for battery charging, automated recovery tank emptying and solution tank filling systems.
